

# Senate Redistricting Committee Meeting

4/13/21 Rm. 535

# Agenda

1. Welcome
2. Presentation by public map submitters and questions about submitted maps
  1. Alexandra Penner
  2. Andy Moore, *People Not Politicians & League of Women Voters*
  3. Austin Buchanan, *Assist. Professor Oklahoma State University*
  4. Dan Williams
  5. Julie Sanders, *Southwest Oklahoma Regional Transportation Planning Organization*
  6. Owen Underwood
  7. Renato Giusti
3. Overview of public map submissions
4. Other business

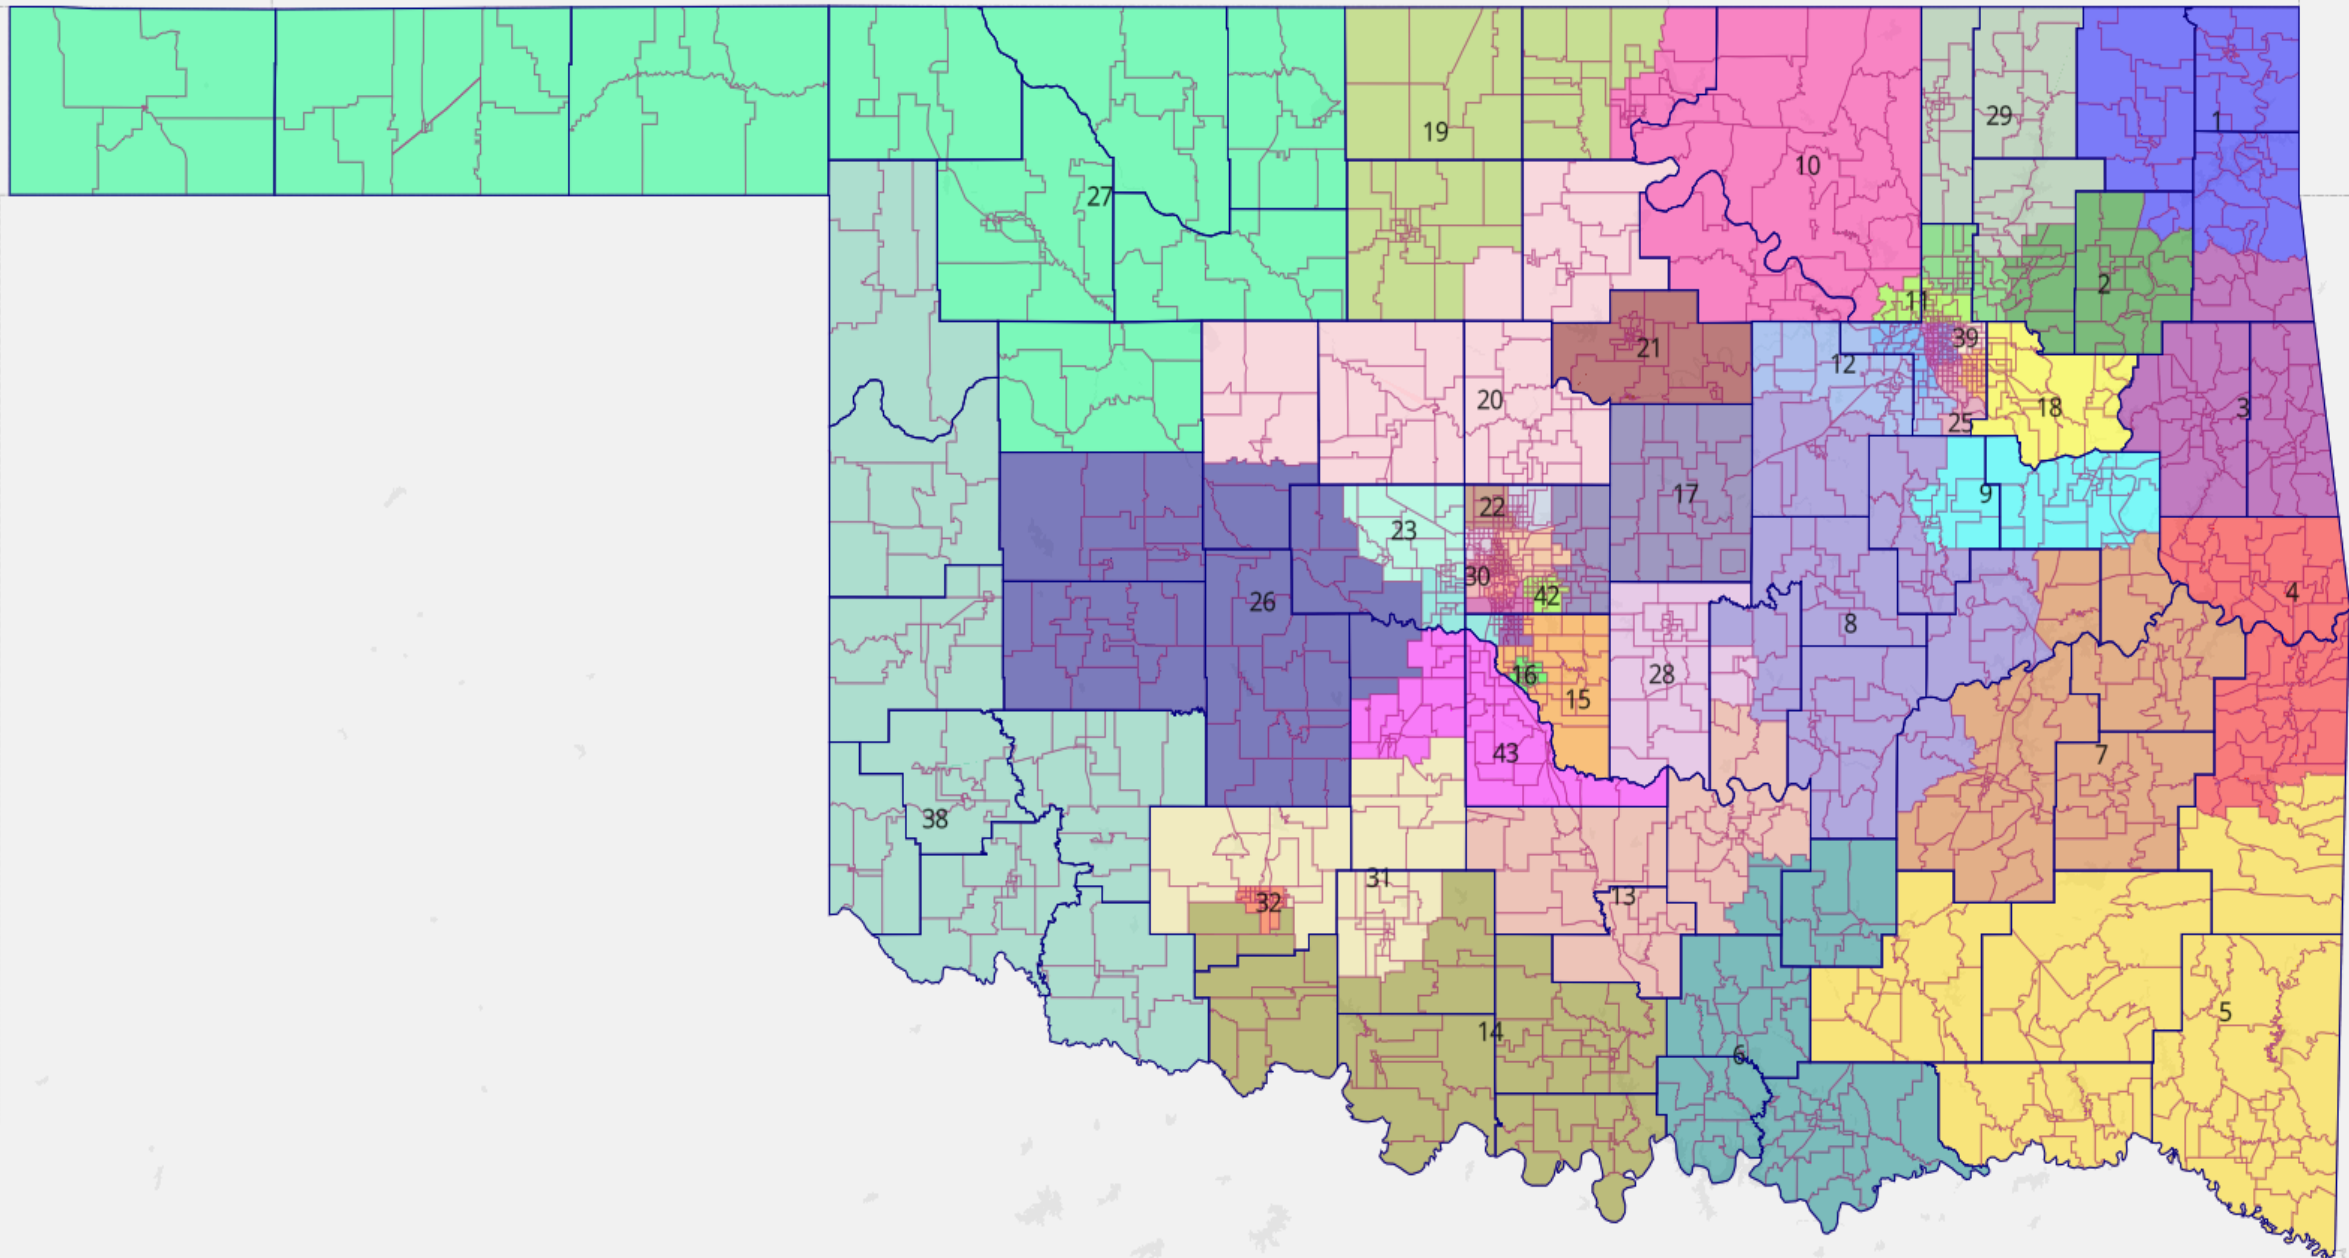

# Alexandra Penner

This redistricting plan prioritizes preserving communities of interest first. In particular creating minority opportunity districts, preserving municipalities, and creating a balance of urban, suburban and rural districts. I also made districts as compact as possible and did not seek to favor either major party.

# Andy Moore

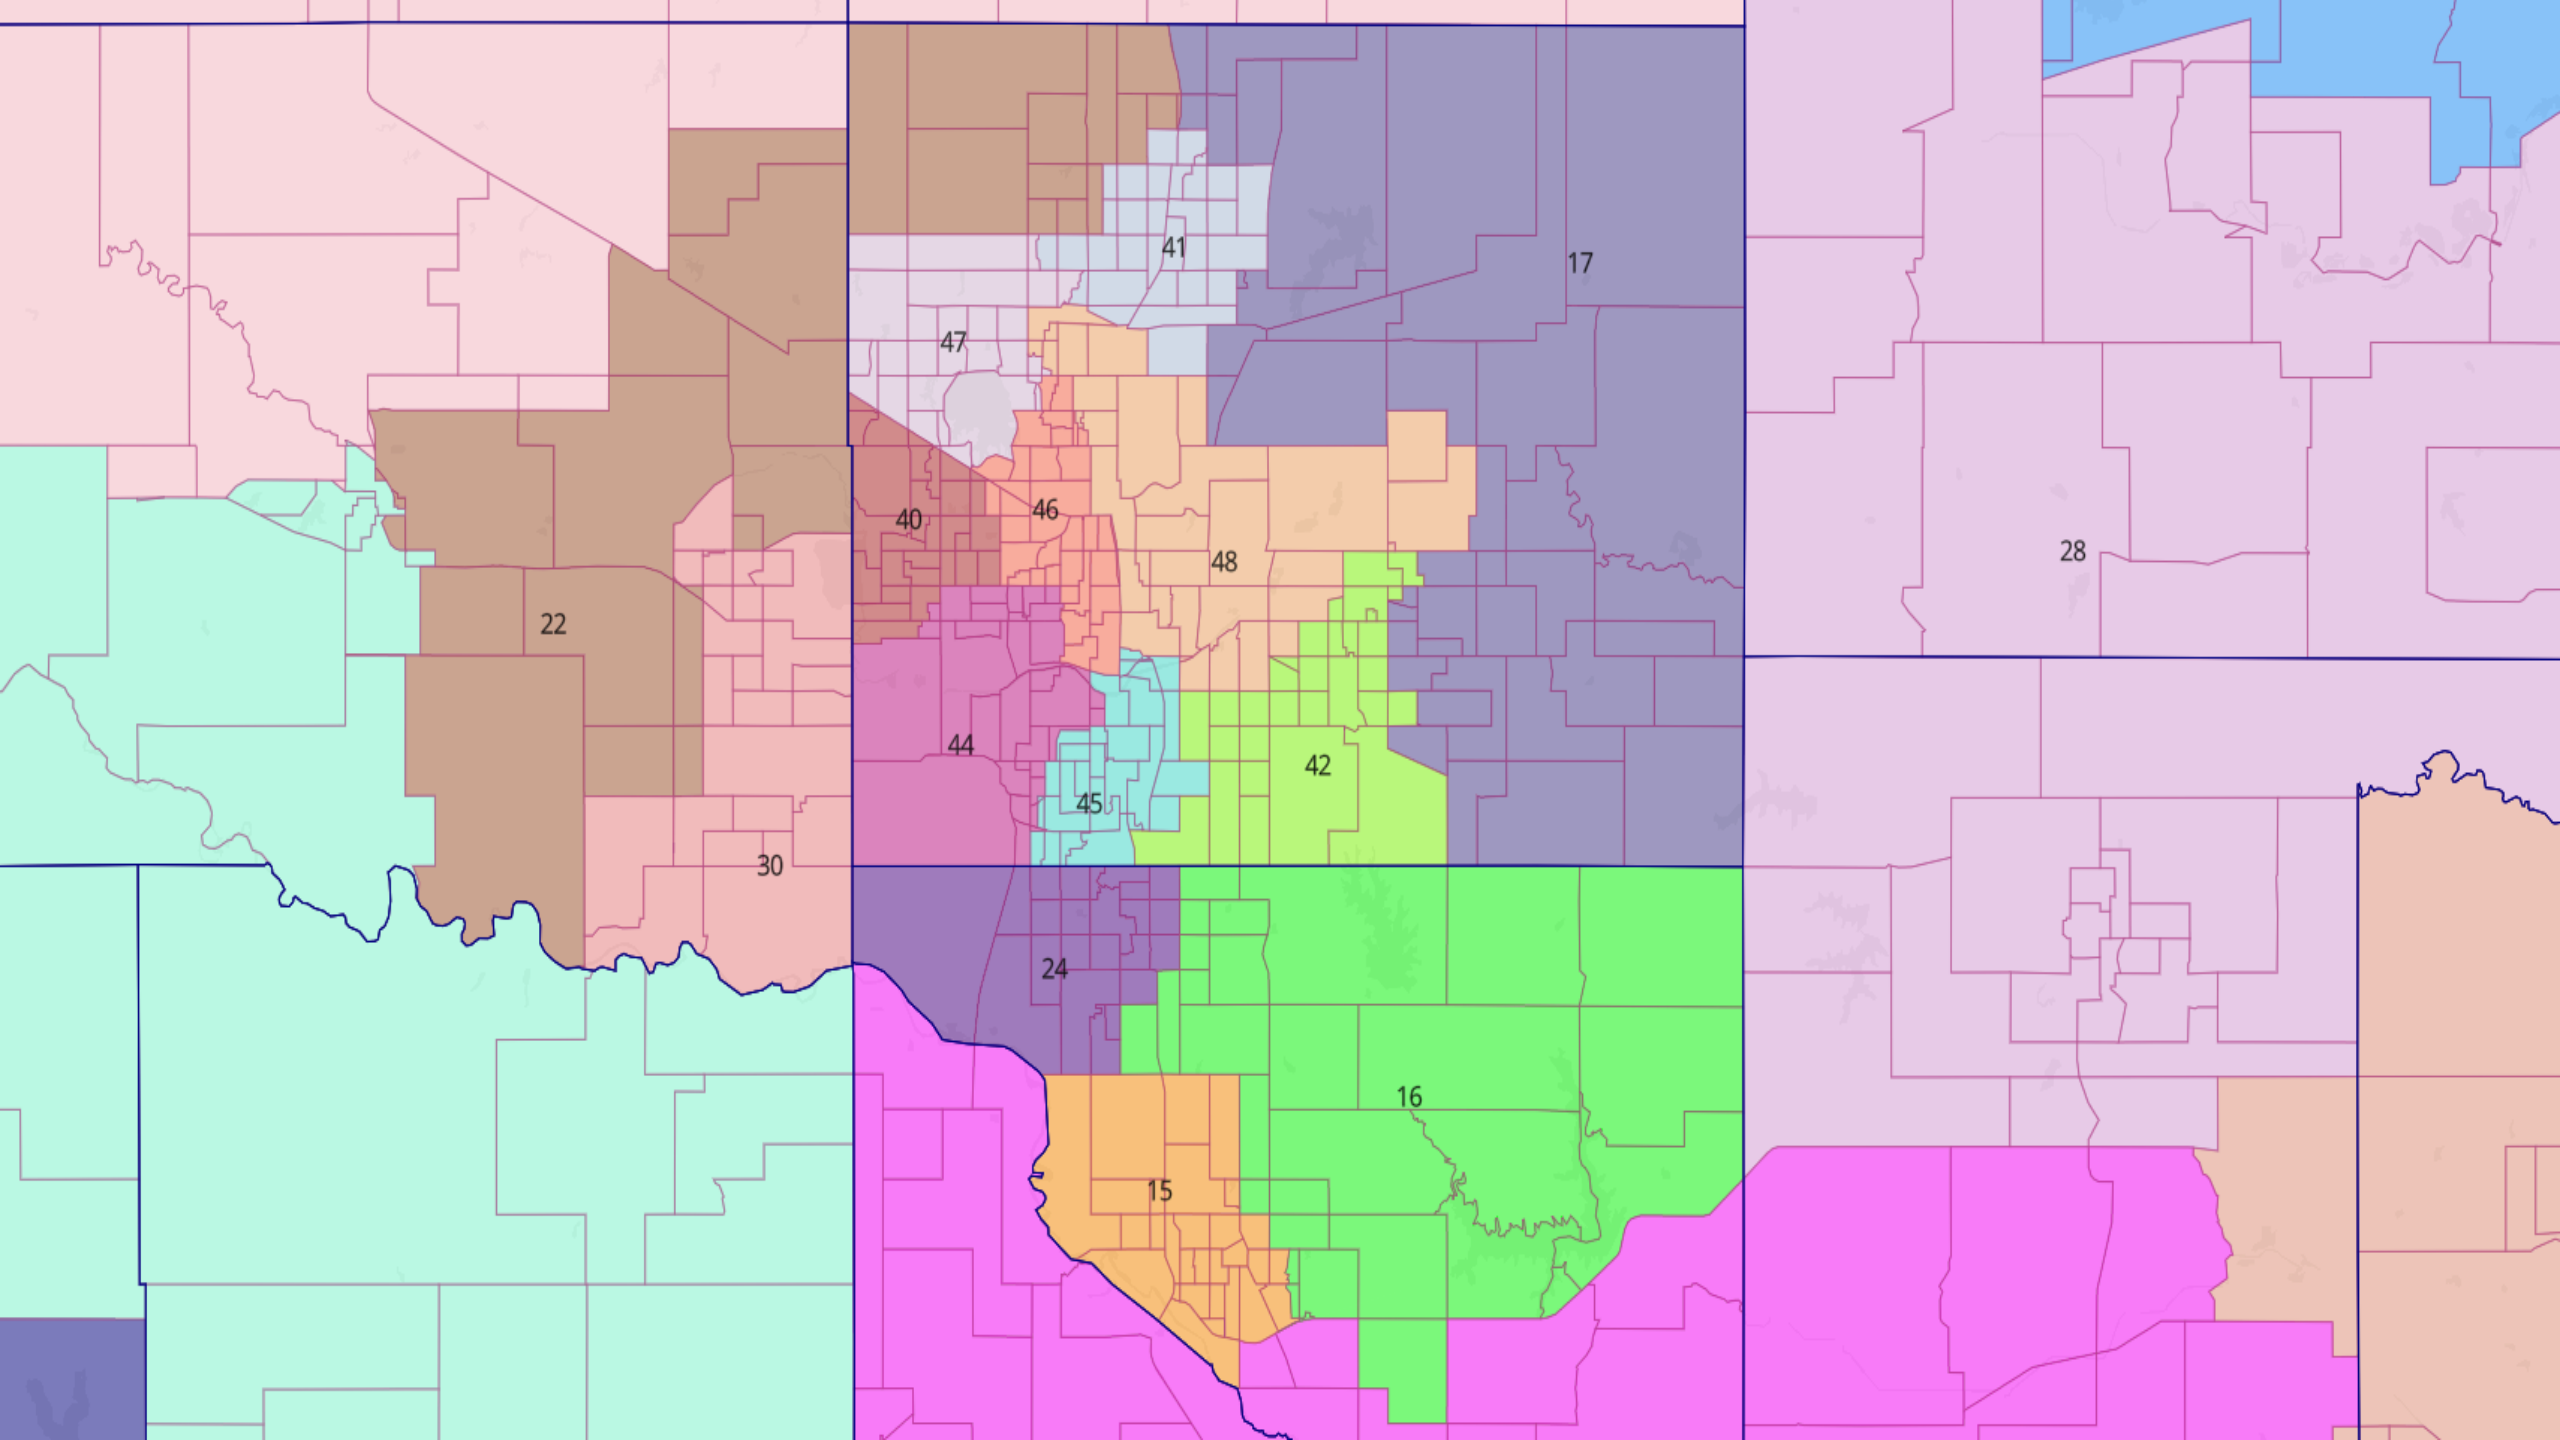

On behalf of People Not Politicians, the League of Women Voters of Oklahoma, and the thousands of Oklahoma citizens throughout the state who have participated in the redistricting process in some way, thank you for inviting the public to be involved in the redistricting process. We all know redistricting isn't a simple or easy process even in a normal year, and this cycle has been anything but typical. We look forward to being involved in the process throughout the year as Census data becomes available.

# Austin Buchanan

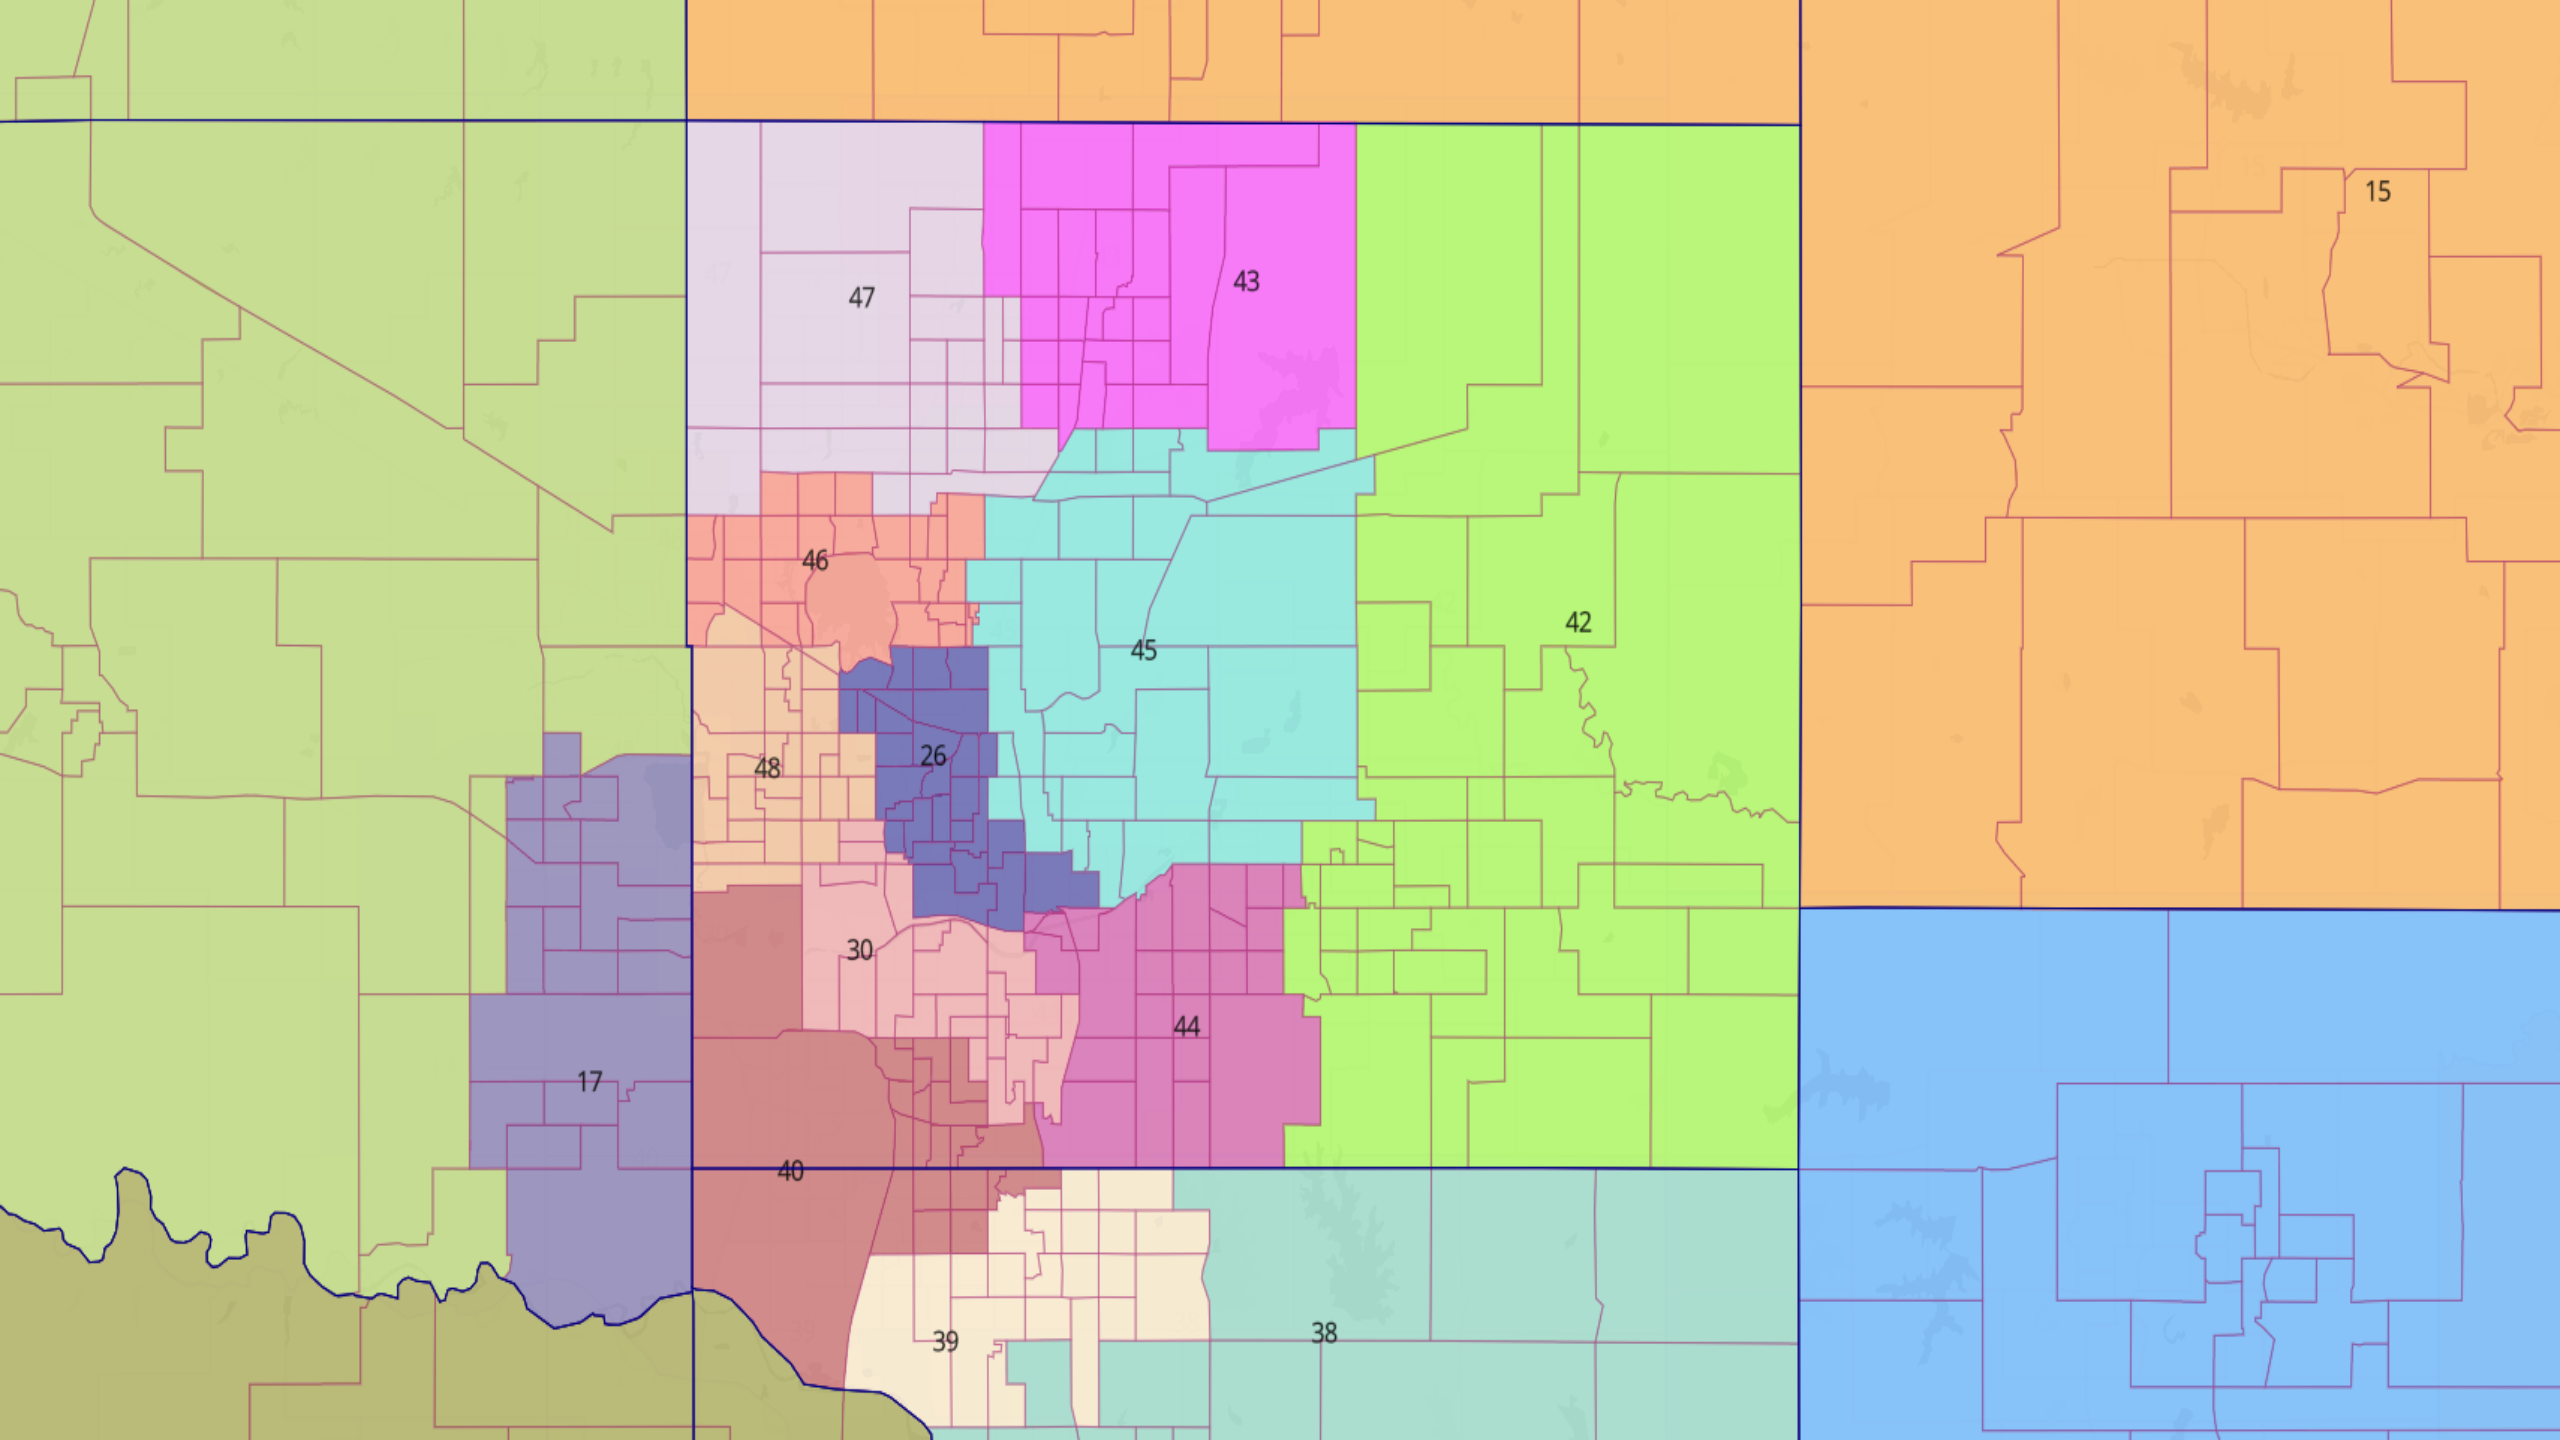

I prioritized keeping counties whole. I took a two-step approach. The first step is to group the counties into clusters. Each cluster should be contiguous, and its population should be an integer multiple of the ideal district population (or within the +/-2.5% bounds). I used optimization software (Gurobi) to maximize the number of clusters. The hope is that this will give many clusters, each having few counties. The second step is to split each cluster into the requisite number of districts. This was done by hand using Dave's Redistricting App. I tried my best to keep them compact

Compactness Score: 75

# Dan Williams

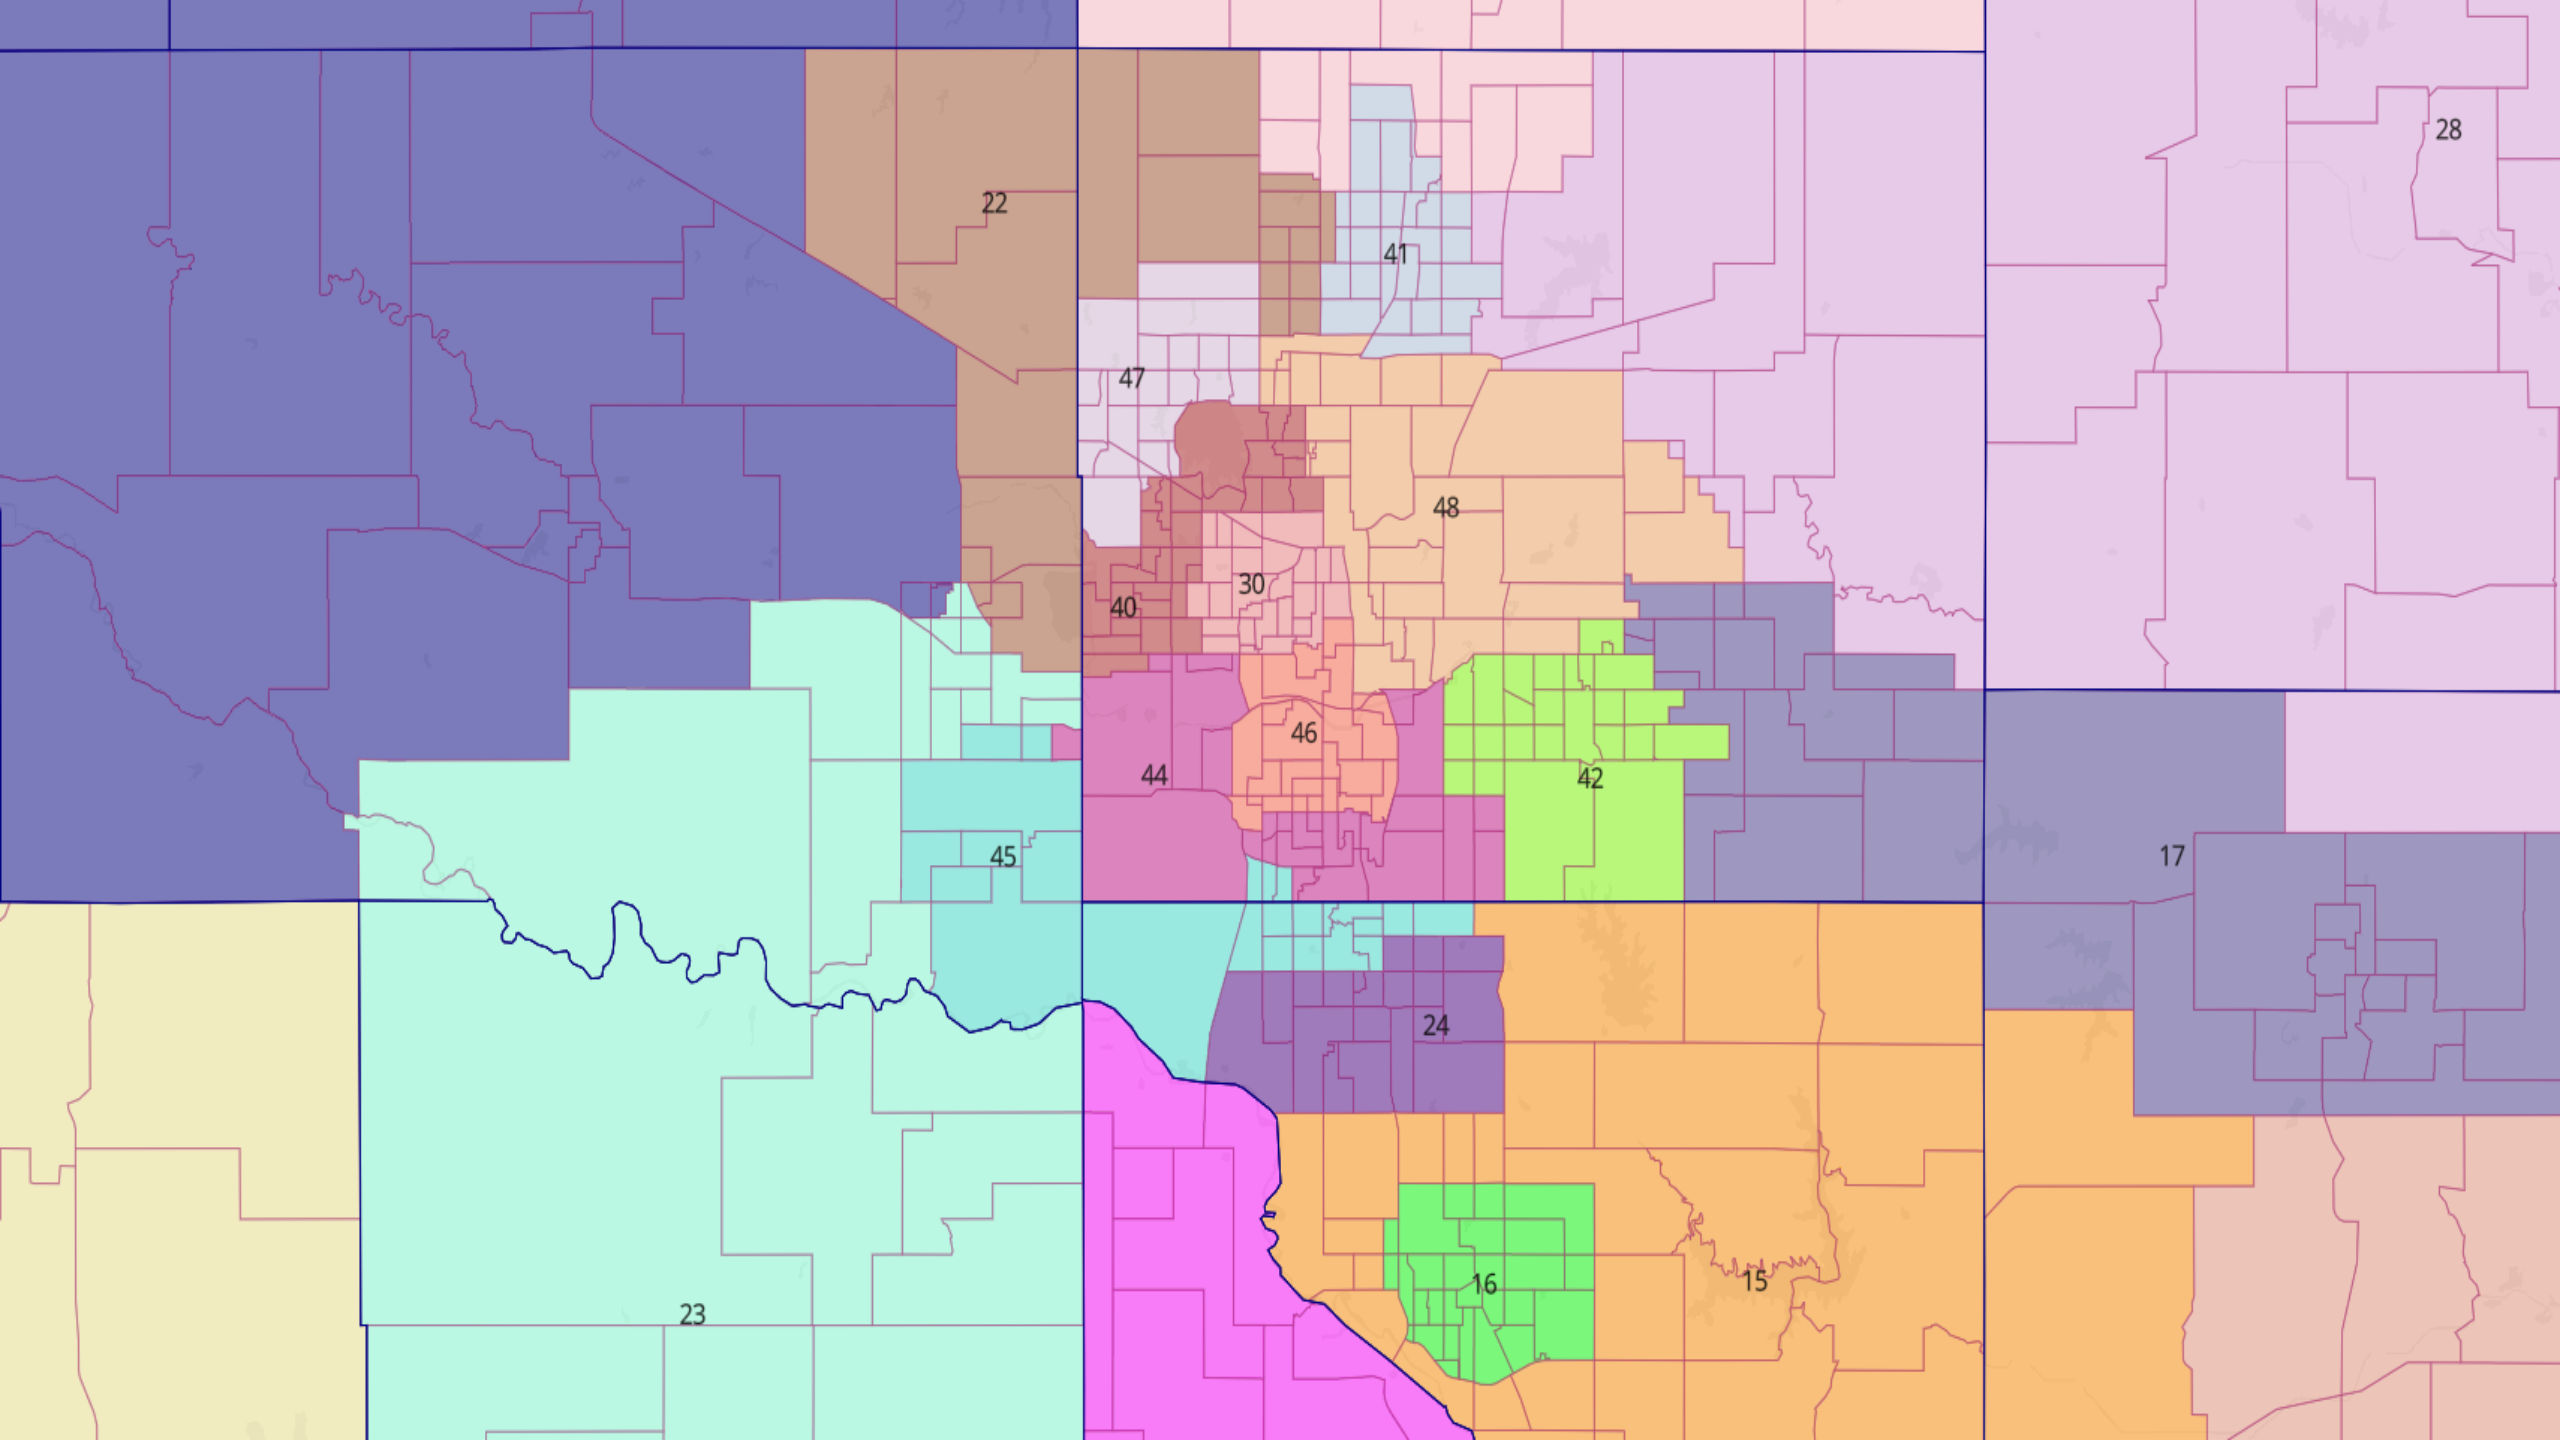

My map takes extra care not to pair incumbents, has a population deviation spread of +1% to – 1% and preserves every single minority opportunity district. My map has higher Reock and Polsby-Popper compactness scores than the current map. My map has less county splits than the current map and attempts to limit other political subdivision splits. This map also keeps districts in their places and doesn't completely move any district from its current area which helps preserve rural representation

# Julie Sanders

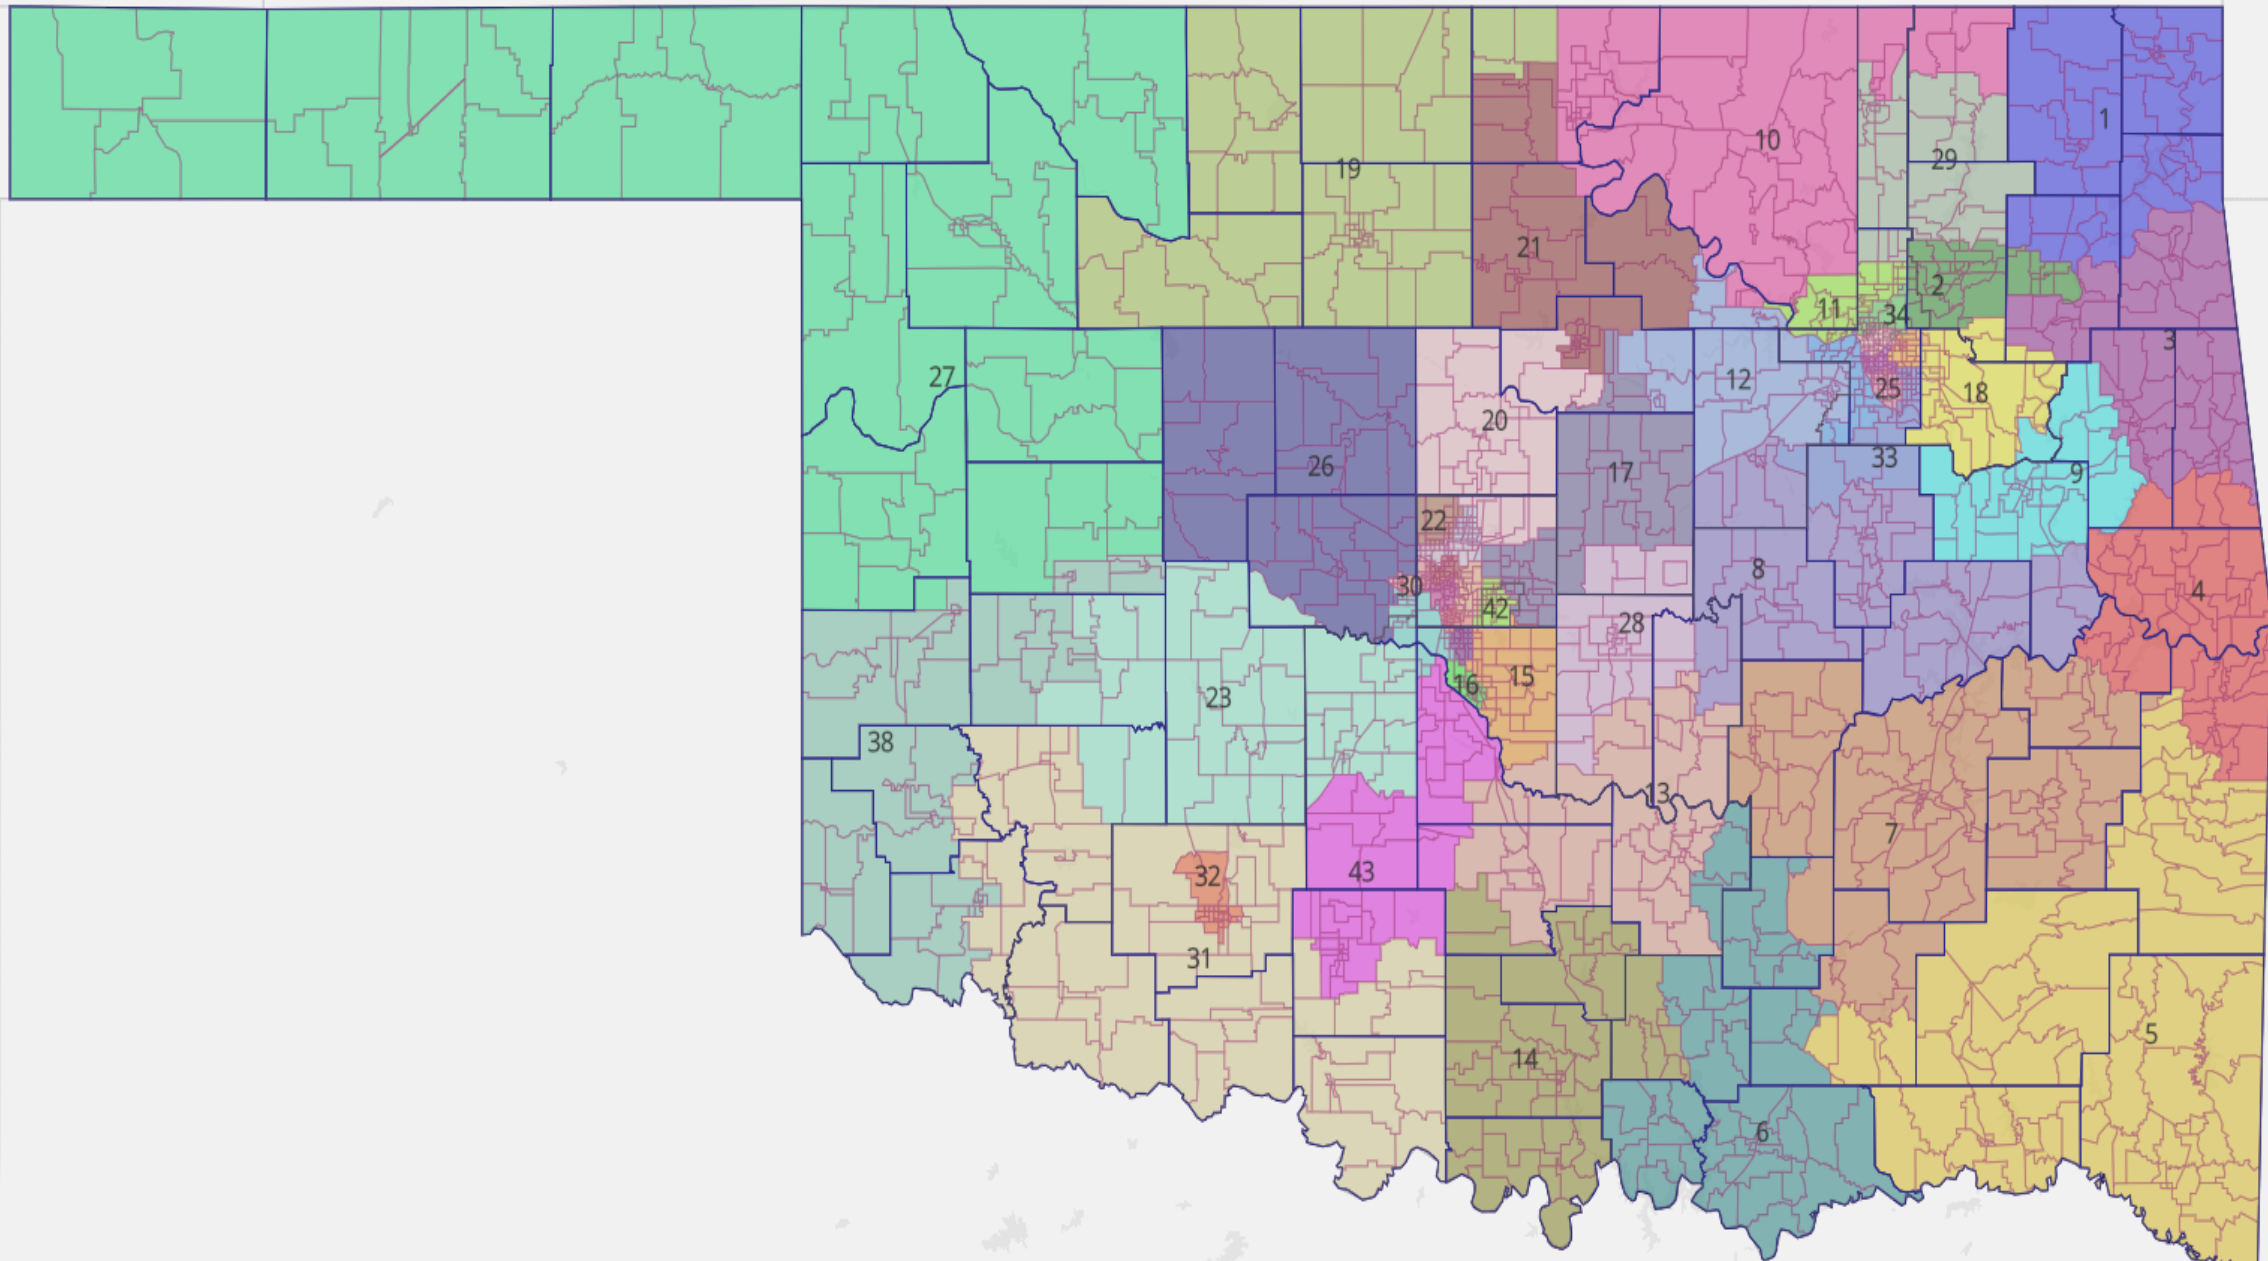

SORTPO the regional transportation planning organization for 16 counties (Association of South Central Oklahoma Governments and South Western Oklahoma Regional Council of Governments) in southwest Oklahoma developed the map based upon the following:

1. concerns expressed at regional redistricting meetings to refrain from splitting municipalities,
2. ensuring that the districts are compact,
3. preserving the rural strength and representative structure in southwest Oklahoma, and
4. southwest Oklahoma's diverse economies.

# Owen Underwood

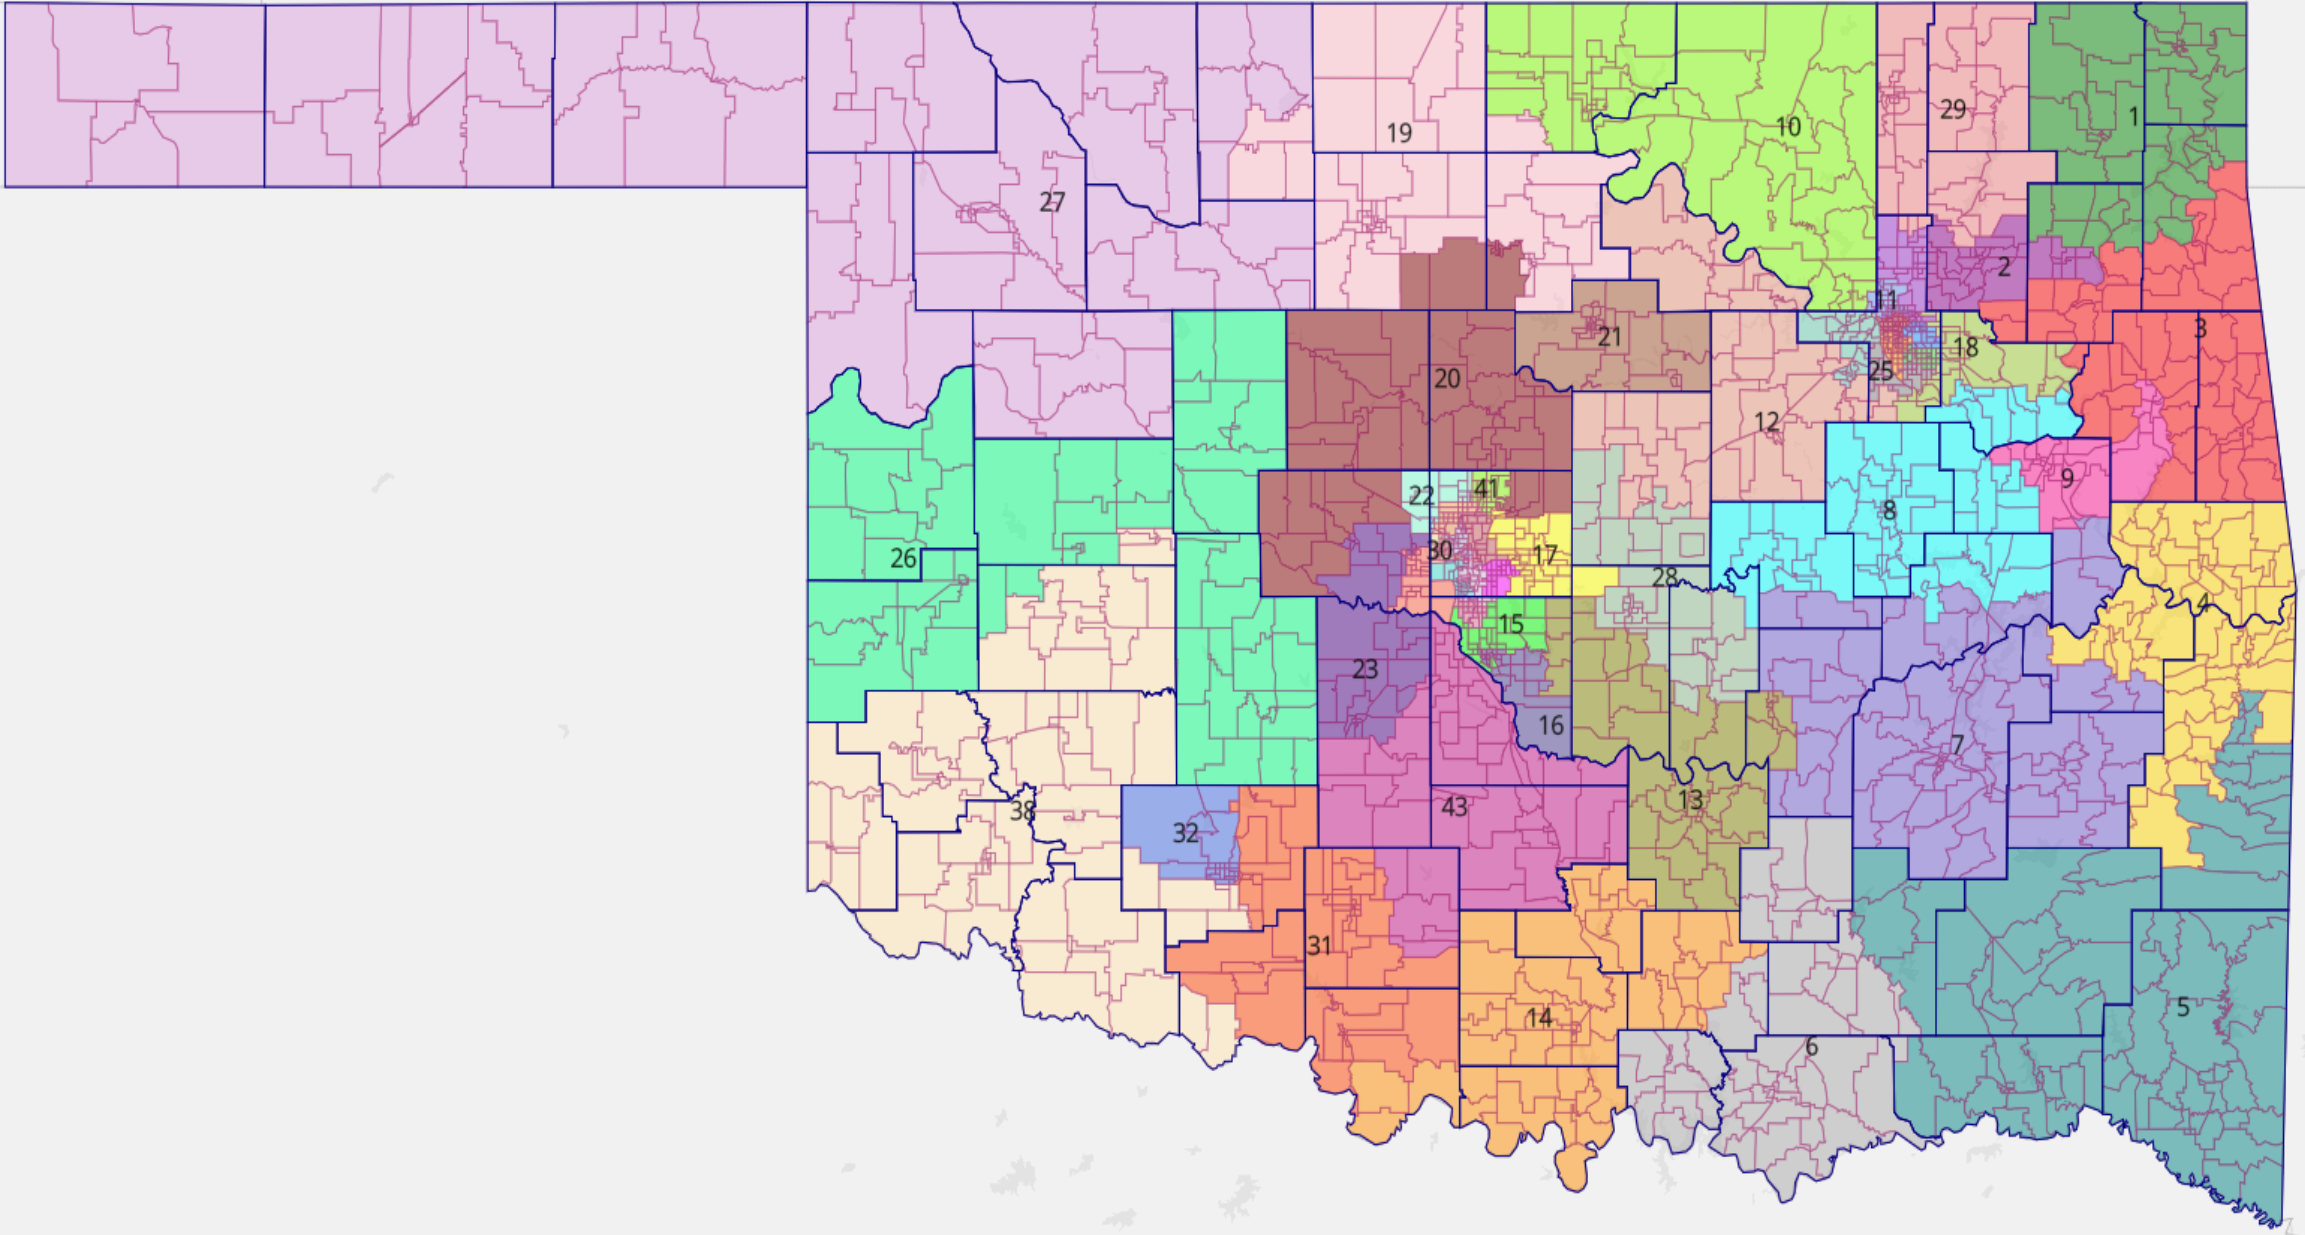

For my maps I tried to keep communities of interest together as well as keep the borders on main roads, and not neighborhood streets. I also tried to keep the population as close to the target population as well. Additionally, I attempted to keep the same general district area as the 2010 districts. To a degree, I attempted to keep political subdivisions intact, but that was not my main intent.

Compactness Score: 59

Polsby-Popper: .3204 Measures how indented district shapes are, bigger is better

Other maps submitted

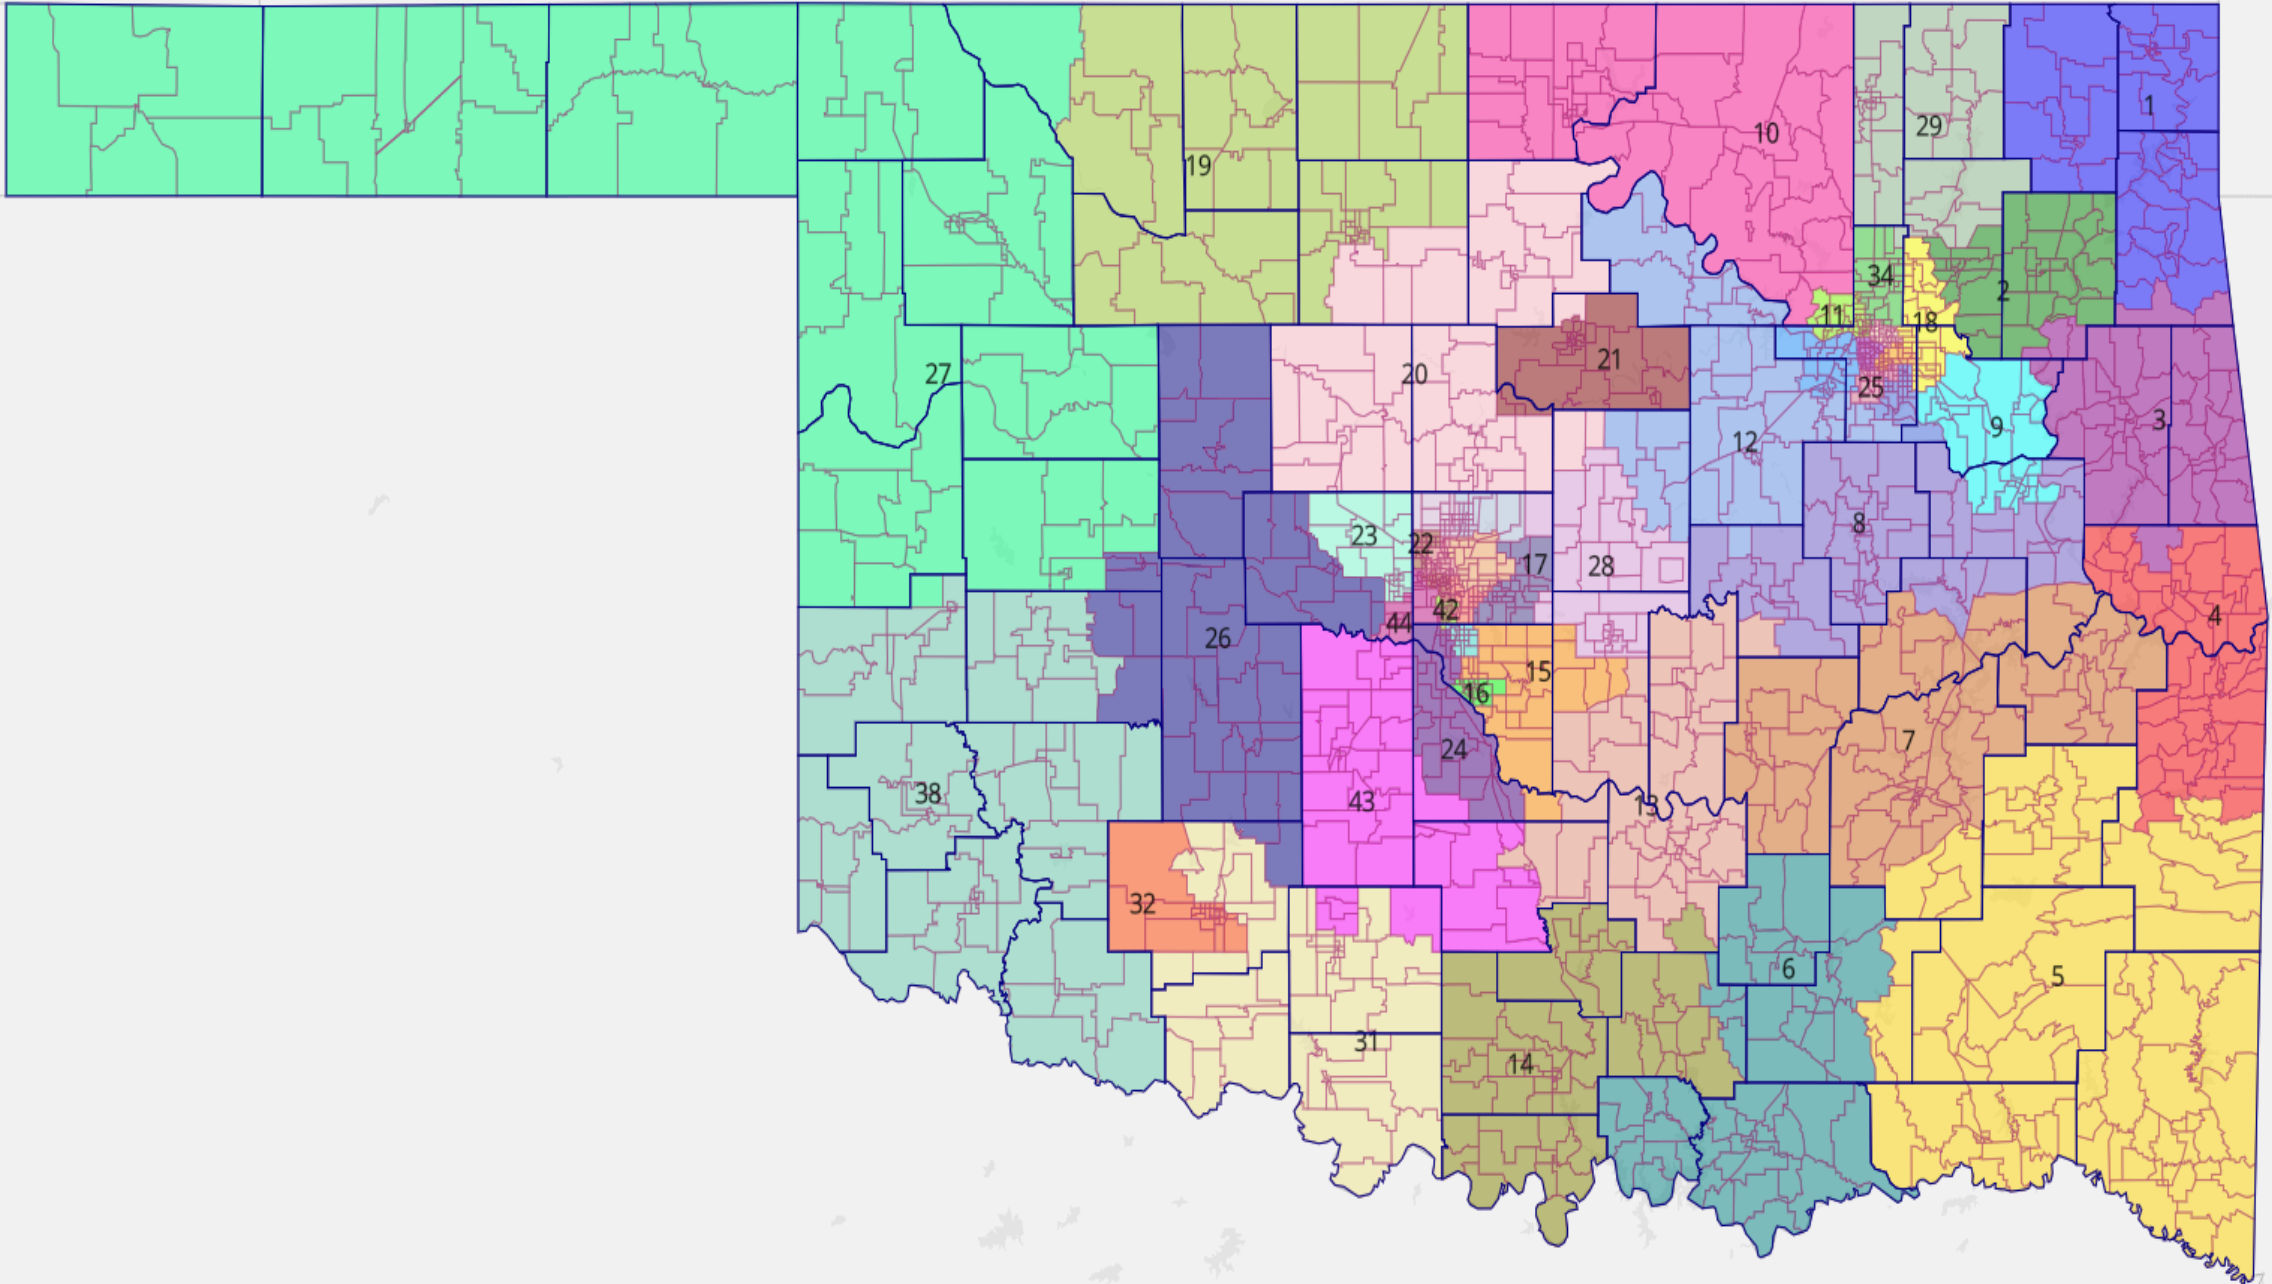

# Caden Matthews

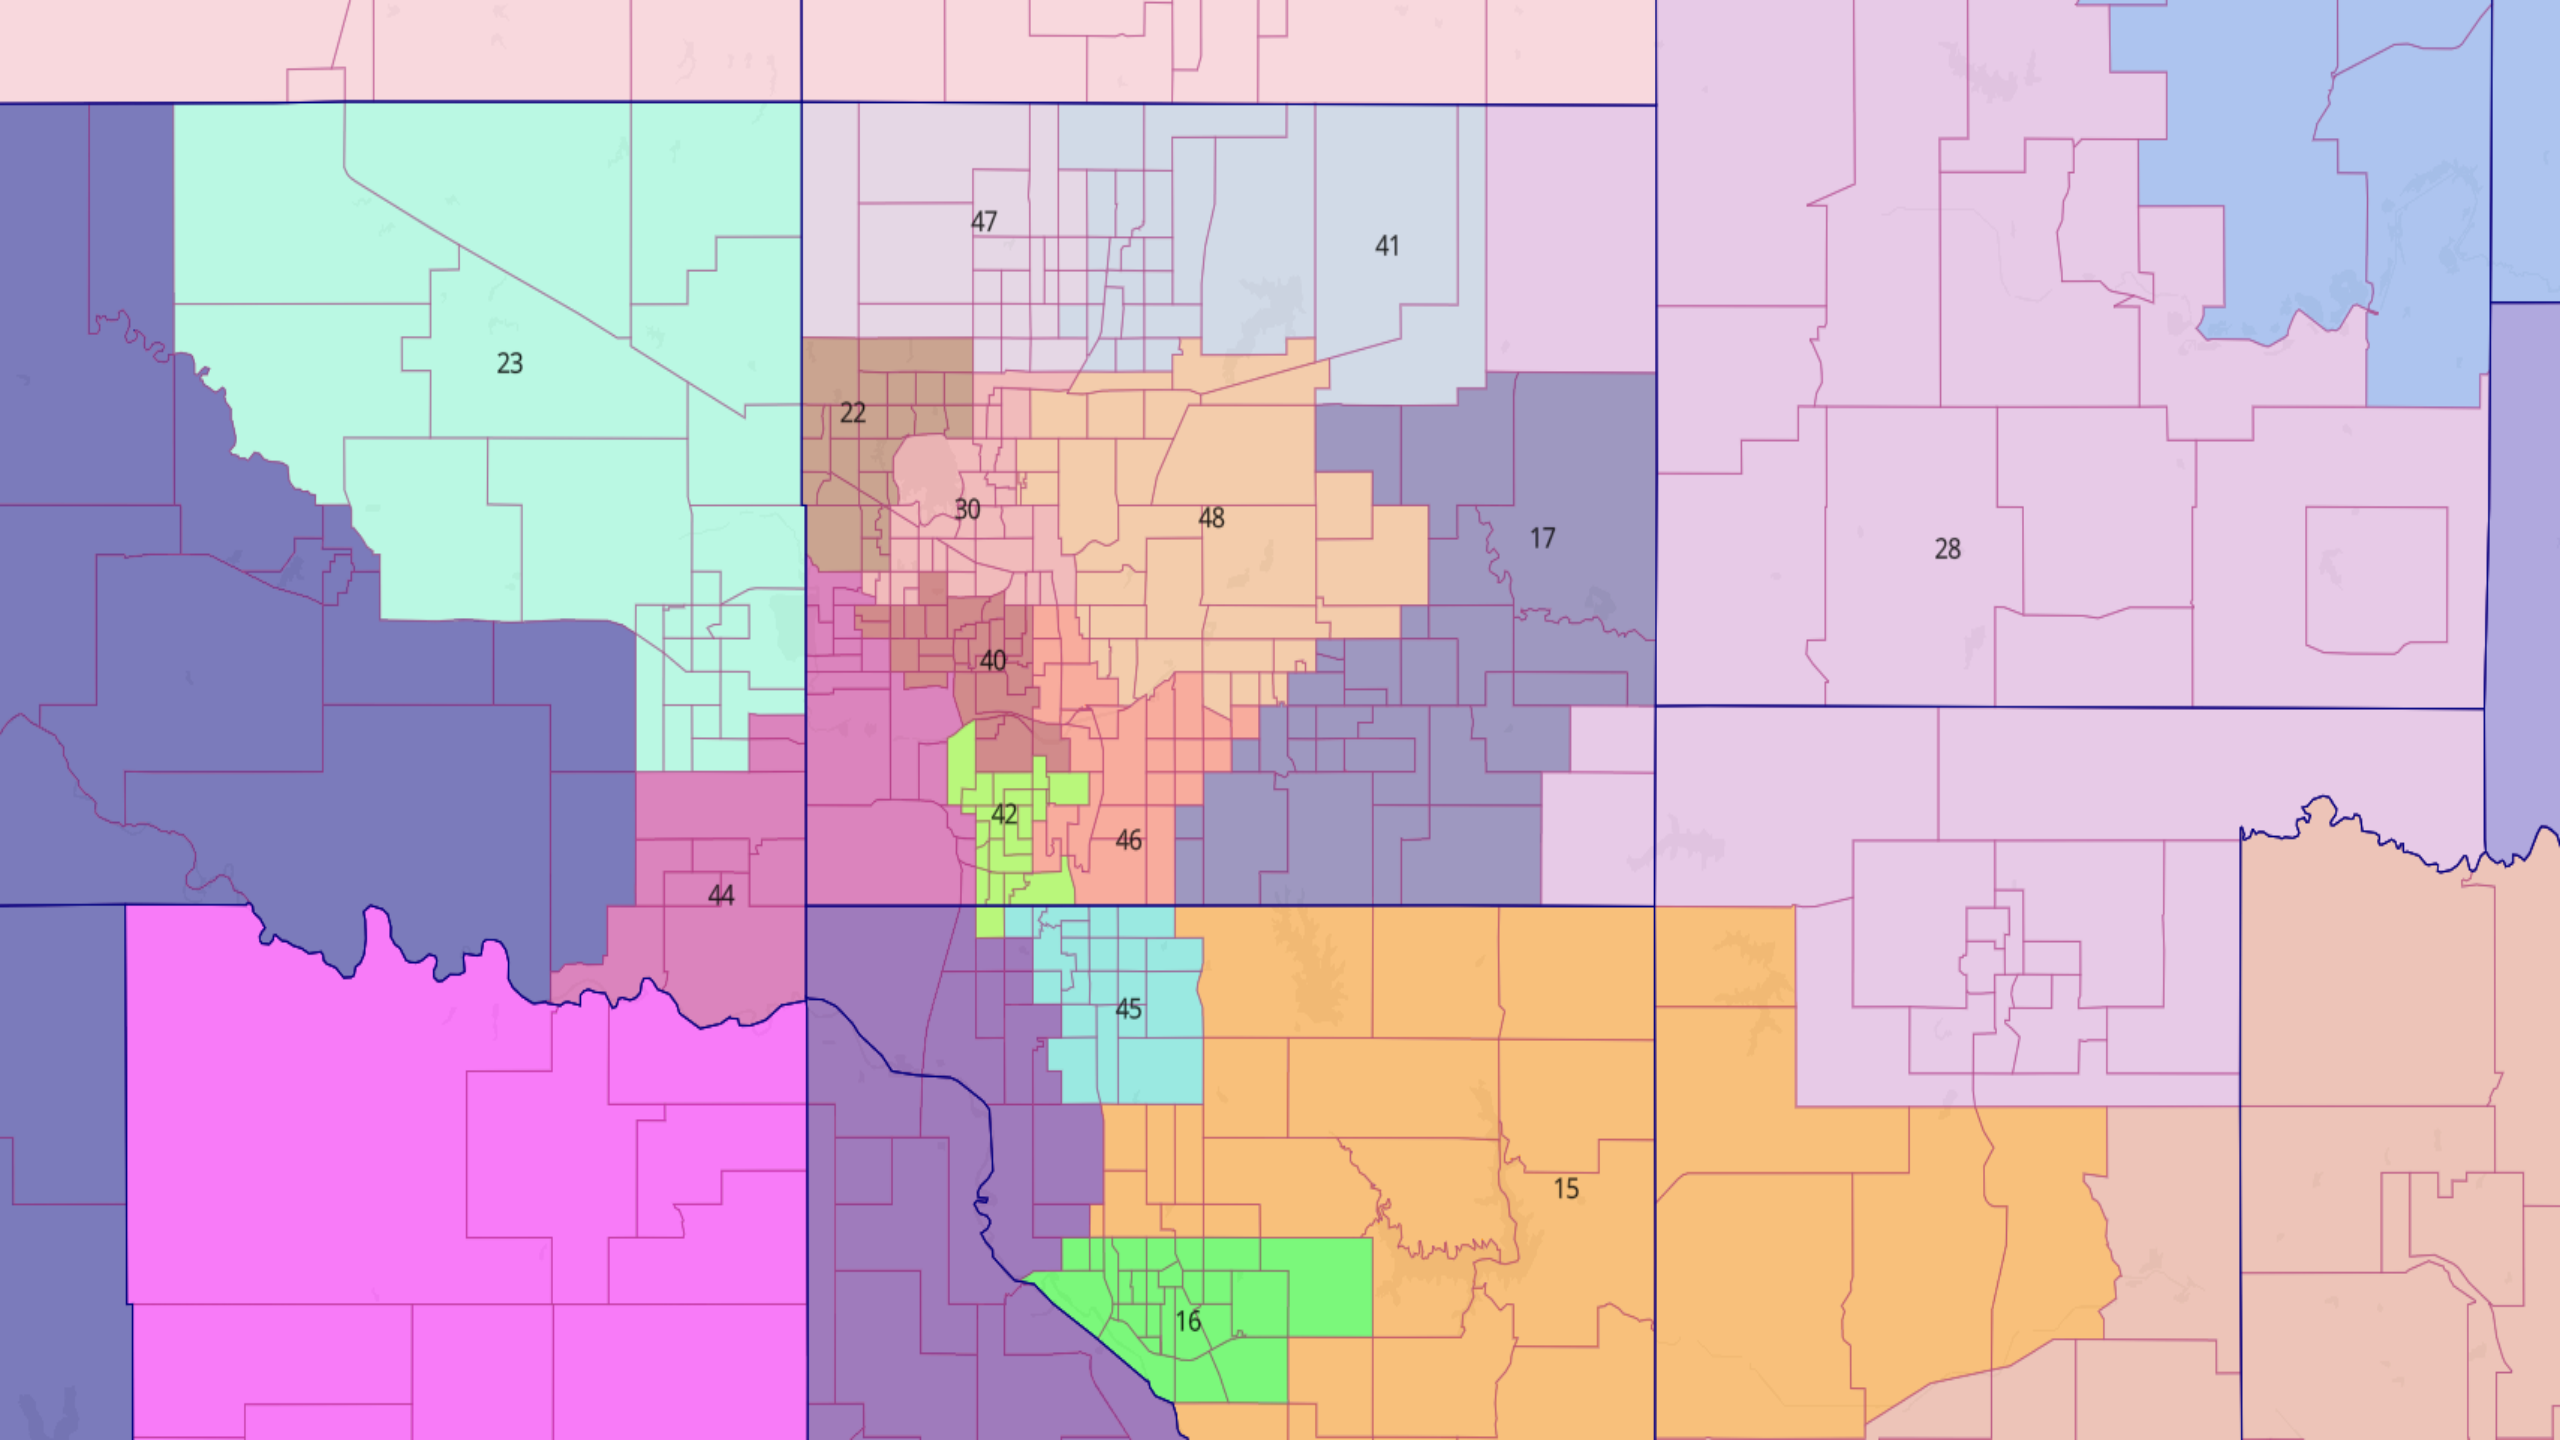

My submission for the 2022 reappointment cycle of the Oklahoma State Senate prioritizes the reasonable compactness of each district while preserving existing communities of interest, undivided towns, and county lines as much as possible. There are no precincts split and county lines are minimally split whilst maintaining equal population under the prescribed deviation. It also aims to keep entire towns in their respective district as not to divide the common interest of communities. Additionally, there are 5 majority-minority districts to ensure compliance to the Voting Rights Act of 1965.

Compactness Score: 72

# Renato Giusti

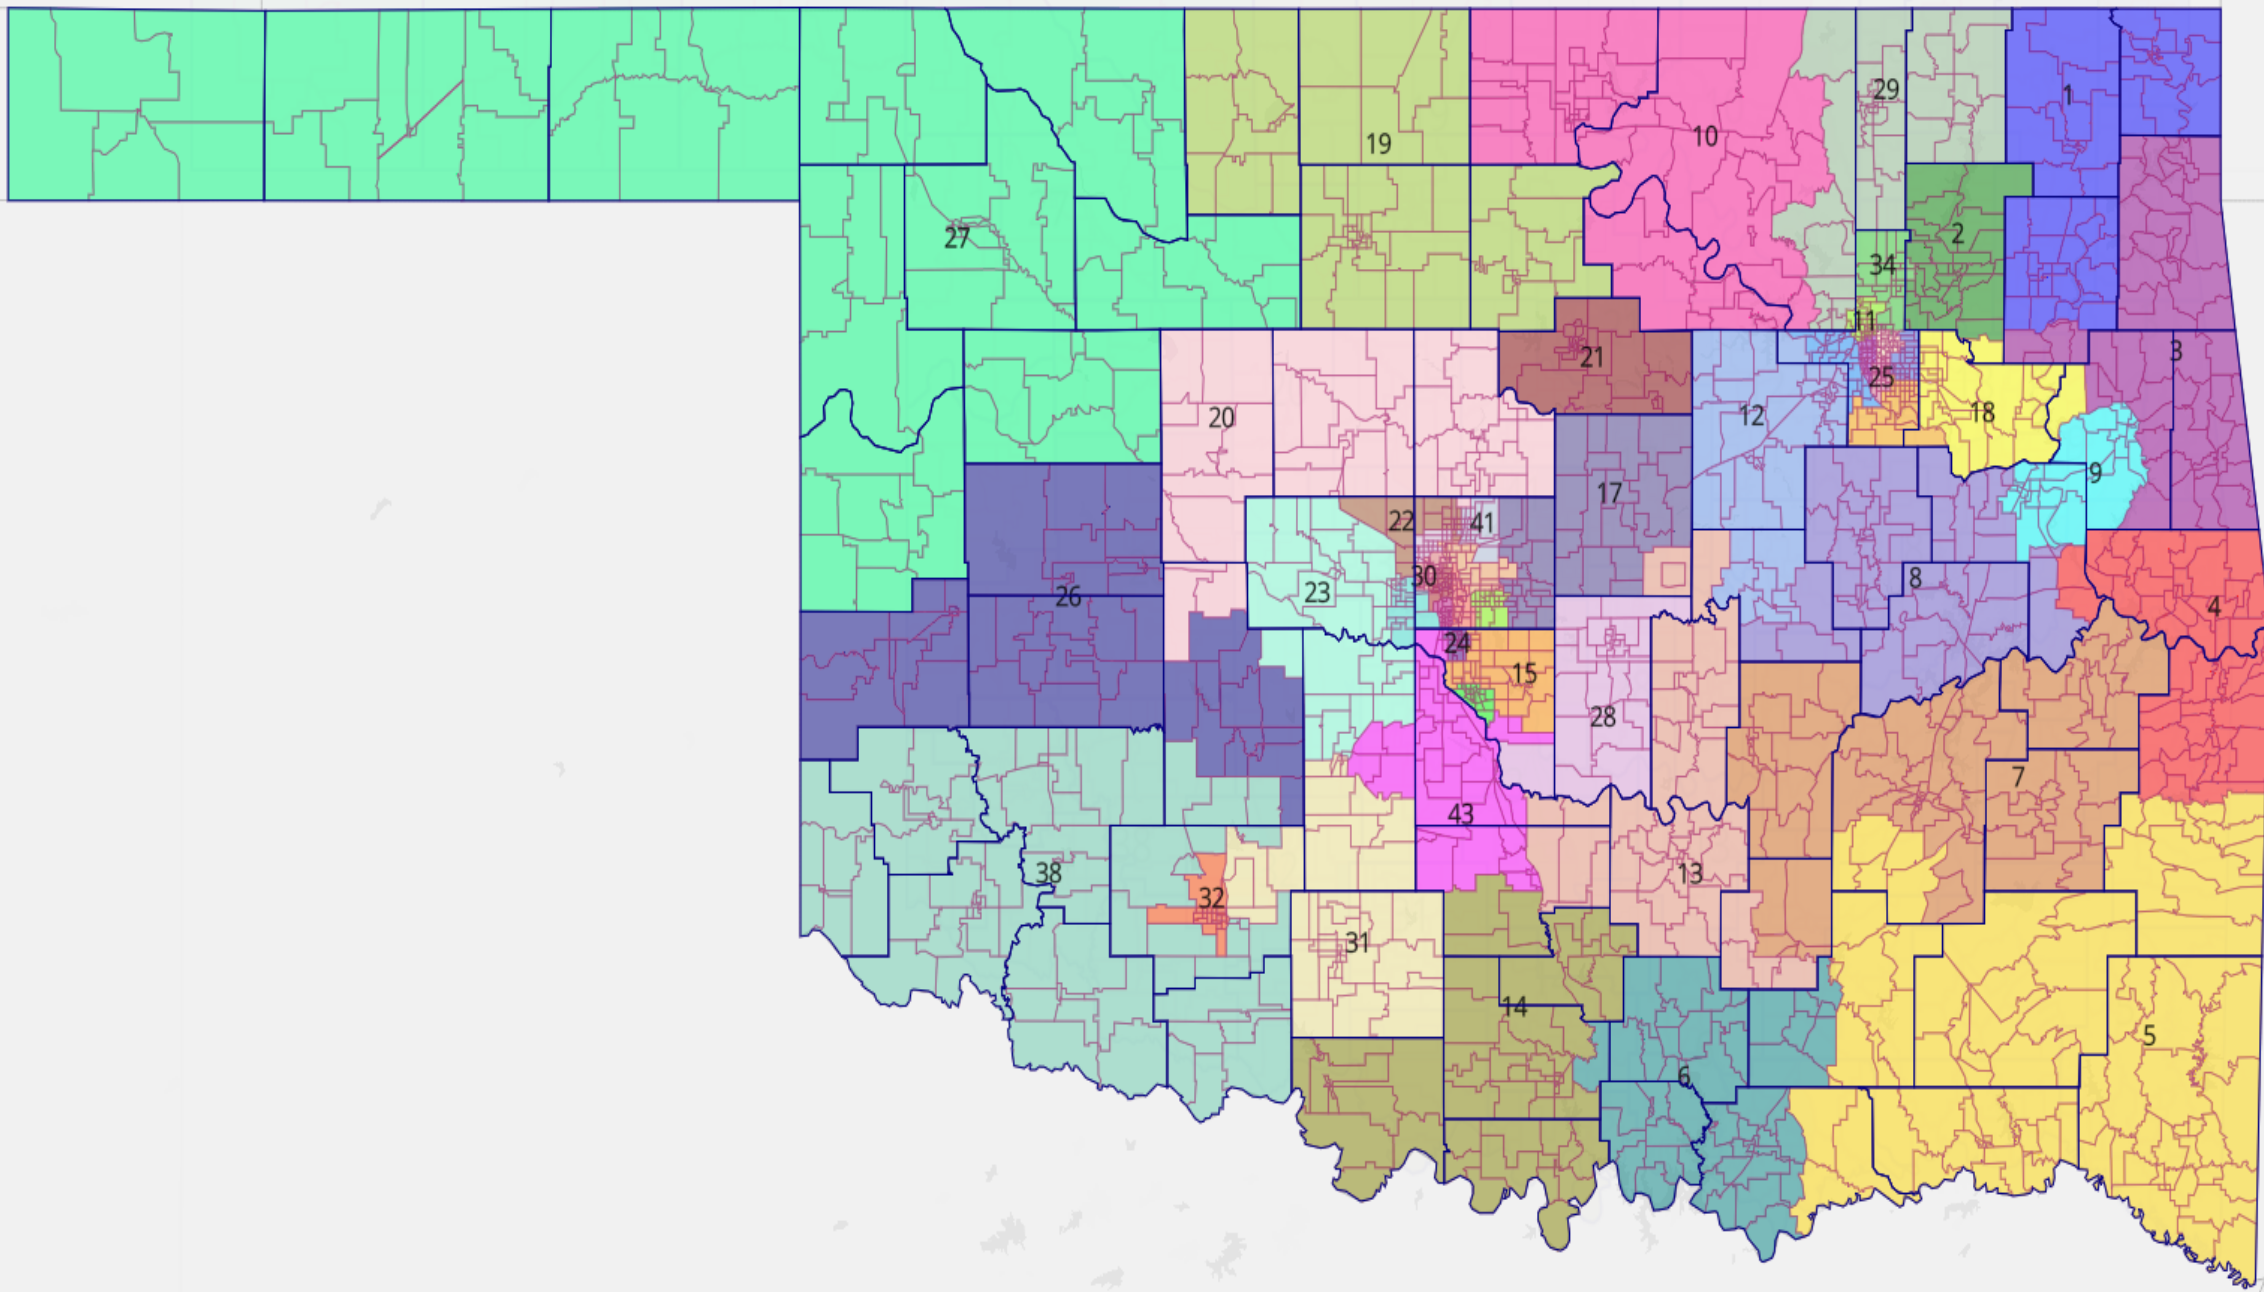

In order for me to draw a fair map, I had to make sure that every community would be represented and that no political party would have an advantage. Urban and rural representation was also very important for me. Thank you so much for this opportunity. I hope y'all like it!
